AIT1500-SG High-Precision Current Transducer

AIT1500-SG has a high gain and measurement accuracy in the full bandwidth range, due to the application of the multi-point zero-flux technology system and high-frequency ripple sensing channel on top of currently existing DC sensor technology.

The multi-point zero-flux technology system secures the high accuracy by utilizing the technology combination of exciting magnetic flux closed-loop control, self-excited magnetic flux gate and multi-closed-loop control that realizes the closed-loop control between excitation magnetic flux and AC/DC magnetic flux generated by primary current, while the high-frequency ripple sensing channel allows the sensor to have the high performance over the full bandwidth range.

Product photo

Key Technologies

◇ Excitation closed-loop control technology
◇ Self-excitation demagnetization technology
◇ Multi-point zero-flux technology
◇ Temperature control compensation technology
◇ Multi-range automatic switching technology

Features

◇ Insulated measurement between primary and secondary side
◇ Excellent linearity and accuracy
◇ Extremely low temperature drift
◇ Extremely low zero drift
◇ Broad band and low response time
◇ Strong anti-electromagnetic interference

Application Domain

◇ Medical Equipment: Scanner, MRI
◇ Power industry: Converter, Inverter □
◇ Renewable Energy: Photovoltaic, Wind energy
◇ Testing Instrument: Power analyzer, High-precision power supply
◇ Smart Power Grid: Power generation and battery monitoring, Medium low voltage substation
◇ Industry Control: Industrial motor drive, UPS, Welding, Robot, Hoist, Elevator, Ski lift

◇ Rail Transit: EMU, Metro, Trolly car□
◇ Ship: Electric driven ship
◇ Car: Electric car

Electrical Performance

Parameter	Symbol	Measuring Conditions	Min	Typ	Max	Unit
Primary nominal direct current	I_{PN_DC}	—	—	±1500	—	Adc
Primary nominal RMS current*	I_{PN_AC}	—	—	1060	—	Aac
Primary current, measuring range	I_{PM}	—	—	—	±1600	Adc
Power supply voltage DC	U_C	—	±14.2	±15	±15.8	V
Current consumption	I_C	Rated primary current	±30	±1530	±1630	mA
Conversion ratio	K_N	Primary/secondary	1:1000	1:1000	1:1000	—
Secondary nominal RMS current	I_{SN}	Rated Primary current	—	±1.5	—	A
Secondary burden resistance	R_M	See Fig. 1	0	1	2	Ω

* refers to AC effective value

Accuracy Measurement

Parameter	Symbol	Measuring Conditions	Min	Typ	Max	Unit
Accuracy	X_G	Input direct current，25±10ºC	—	—	10	ppm
Linearity error	ε_L	—	—	—	2	ppm
Offset temperature coefficient	T_C	—	—	—	0.1	ppm/K
Offset stability over time	T_T	—	—	—	0.2	ppm/month
Power supply interference	T_V	—	—	—	1	ppm/V
Zero offset current	I_O	@25ºC	—	—	1 (can be adjusted to zero by users)	ppm
Ripple current	I_N	DC-10Hz	—	—	0.5	ppm
Step response time to 90%I_{PN_DC}	t_r	di/dt of 100A/µs	—	—	1	µs
di/dt accurately followed	di/dt	—	100	—	—	A/µs
Frequency bandwidth (-3dB)	BW	—	0	—	500	kHz
Zero offset current	I_{OT}	Full temperature range	—	—	±5	µA

Safety Characteristics

Parameter	Symbol	Measuring Conditions	Value	Unit
Insulation voltage / Between primary and secondary	Ud	50Hz,1min	2.5	KV
Impulse withstand voltage / Between primary and secondary	Uw	50µs	5	KV
Insulation voltage / Between secondary and shield	Ud	50Hz,1min	2.5	KV
Creepage distance / Between primary and shield	d_{CP}	—	11	mm
Clearance distance / Between primary and shield	d_{CI}	—	11	mm
Comparative tracking index	CTI	IEC-60112	275	V

General Characteristics

Parameter	Symbol	Measuring Condition	Min	Typ	Max	Unit
Ambient operating temperature	T_A	—	-40	—	+85	ºC
Ambient storage temperature	T_S	—	-40	—	+85	ºC
Relative humidity	RH	—	20	—	80	%
Mass	M	—		1150±80		g

Burden Resistor Instructions

AIT 1500 Series

Maximum Rm(Ω) vs Primary current Ip(A rms)
Operating Status Instructions

◇ Normal status：

The green indicator is on when the device is running normally:
After the device is powered on, the green indicator is on when the device is running normally, and the 3rd pin and 8th pin of D-Sub9 interface are connected together.

◇ Fault status：

The green light will be off when the transducer is in fault mode.
Trouble-shooting:
a) When the green light is off, the power supply should be checked as the first step;
b) If the power supply is normal, then the primary current is over the specified measurement range and the transducers will be in overload mode.
In this mode, the transducers will be working in non-zeroflux mode, that the secondary current remains at specified maximum output, the secondary and primary currents are not in proportional and the connection between pin 3 & 8 of the DB9 interface will be off.

Connection system

1. D-Sub9 Connection terminal pin function definition

Pin No.	1	2、7	3	4	5	6	8	9
Definition	I_Output COM	N.C	Interlock(-)	GND	-15V Supply	I_Output	Interlock(+)	+15V Supply
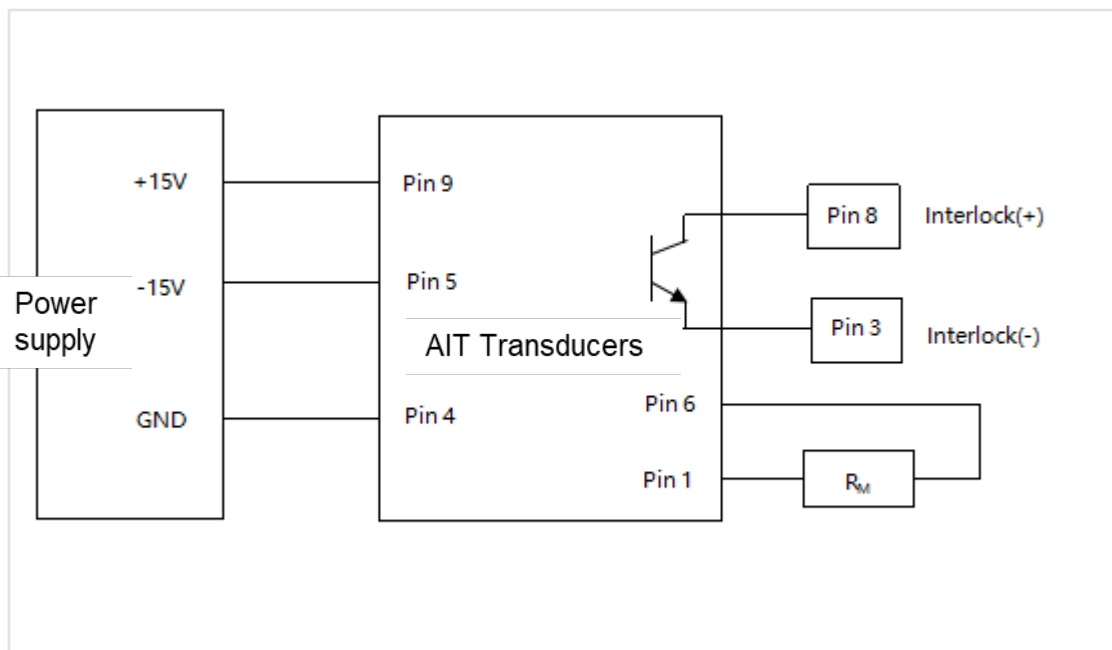

Test instruction：

The primary current I_P can be obtained by measuring the test current I_s flowing through R_M or the voltage U_R across R_M：

$$I_P = K_N * I_S = K_N * (U_R/R_M)$$

2. Interlock Port connection description：

There are two types of Interlock Port connection based on users' actual application shown as Fig A and Fig B：

$I_{CE\max} : 30mA$

$I_{CE\min} : 2mA$

+3…+35V

R

Vout

Photocoupler working status is as follows:
Connected: Transducer is working normally and the Vout output voltage is Gnd
Disconnected: Transducer is not working normally and the Vout output voltage is Vcc

$R_{\min}(K\Omega) = \dfrac{V+(V)-0.4V}{30mA}$

$R_{\max}(K\Omega) = \dfrac{V+(V)-0.4V}{2mA}$

Fig B: High output when the transducer is operating normally

3. The output of the pin Vout in the optocoupler is related to the user-designed circuit, as shown in the following table.

Parameter	Vout	Description
Fig A	<0.2V	The transducer is working normally.
	Vcc	The transducer is working abnormally, i.e., in overload mode or abnormal power supply
Fig B	<0.2V	The transducer is working abnormally, i.e., in overload mode or abnormal power supply
	Vcc	The transducer is working normally.
